ABSTRACT

The main objective of this project is to develop an application that's capable of storing the previous FYP project and at the same time to ease the evaluation process for the examiner.

The FYP gallery allows users to view the previous project, and make an evaluation directly from that system.

The system also ensures that the record searching process of required information on the content in that system is easier and faster. The system is developed using *HTML, CSS, MYSQL and PHP*.

INTRODUCTION

PREAMBLE

For our Final Year Project (FYP) we developed a system that enables graduating students to acknowledge previous project details. This system displays the information (*Project Title, Poster, Description, Report*) of past projects and makes it easier for the kulliyyah to keep track of all records. This system gathers all the information that is needed in one place. In addition, the lecturers and judges from the FYP showcase can directly make an evaluation from their device.
